

## **AMENDMENTS TO THE CLAIMS:**

The listing of claims will replace all prior versions, and listings of claims in the application:

## **LISTING OF THE CLAIMS**

1. (Original) Within a telecommunications network, a method of conducting covert surveillance of a subject, said surveillance including surveillance of a monitored call connected over the network, said call being between the subject and an associate and including call progress data as well as circuit-switched or packet-switched call content comprising bearer traffic exchanged between the subject and the associate, said method comprising:

- (a) clandestinely receiving the circuit-switched call content;
- (b) converting the received circuit-switched call content into a packet-switched format; and,
- (c) delivering the call content in the packet-switched format to a designated law enforcement agency over a packet-switched data network.

2. (Original) The method of claim 1, wherein step (c) further comprises: transmitting the received call content to the law enforcement agency in substantially real-time while the monitored call is in progress.

3. (Original) The method of claim 1, further comprising: storing the received call content prior to step (c).

4. (Original) The method of claim 3, wherein step (c) further comprises: providing the law enforcement agency with access to the stored call content; and,  
transmitting the stored call content and call progress data to the law enforcement agency upon receipt of a request therefor from the law enforcement agency.

5. (Original) The method of claim 1, further comprising: storing the received call content; and,  
providing the law enforcement agency with access to the stored call content; and,

step (c) further comprises both: (i) transmitting the received call content to the law enforcement agency in substantially real-time while the monitored call is in progress; and, (ii) transmitting the stored call content to the law enforcement agency upon receipt of a request therefor from the law enforcement agency.

**6. (Original)** The method of claim 1, further comprising:  
applying data compression to the received call content in the packet-switched format.

**7. (Original)** The method of claim 1, further comprising:  
obtaining the call progress data; and,  
storing the call progress data.

**8. (Original)** Within a telecommunications network, a system for conducting covert surveillance of a subject, said surveillance including surveillance of a monitored call connected over the network, said monitored call being between the subject and an associate and including circuit-switched or packet-switched call content comprising bearer traffic exchanged between the subject and the associate, said system comprising:

monitoring means for clandestinely receiving the circuit-switched or packet-switched call content;

translation means for converting the received circuit-switched call content into a packet-switched format; and,

transmission means for delivering the call content in the packet-switched format to a designated law enforcement agency.

**9. (Original)** The system of claim 8, wherein the transmission means transmits the received call content to the law enforcement agency in substantially real-time while the monitored call is in progress.

**10. (Original)** The system of claim 9, further comprising:  
storage means for storing the received call content prior to delivery by the transmission means.

**11. (Original)** The system of claim **10**, further comprising:  
interface means for providing the law enforcement agency with access to the  
storage means to selectively obtain the stored call content therefrom; and,  
wherein the transmission means transmits the stored call content to the law  
enforcement agency upon receipt of a request therefor from the law enforcement  
agency.

**12. (Original)** The system of claim **8**, further comprising:  
storage means for storing the received call content; and,  
interface means for providing the law enforcement agency with access to the  
storage means to selectively obtain the stored call content therefrom; and,  
wherein the transmission means both: (i) transmits the received call content to  
the law enforcement agency in substantially real-time while the monitored call is in  
progress; and, (ii) transmits the stored call content to the law enforcement agency upon  
receipt of a request therefor from the law enforcement agency.

**13. (Original)** The system of claim **8**, wherein the transmission means  
comprises a packet-switched data network.

**14. (Original)** The system of claim **8**, wherein the translation means  
comprises a packet-switched gateway.

**15. (Original)** The system of claim **8**, wherein the monitoring means  
comprises an application server complex implemented as an adjunct to a  
telecommunications switch providing service to the subscriber.
